Different solutions cannot always be used together, and not all solutions are safe for use with all lens. Use only recommended solutions that are fresh and sterile. Never use solutions.

Eyecare practitioners should instruct the patient to remove the lens immediately if the eye becomes red or irritated. Eyecare practitioners should carefully instruct patients about the importance of maintaining proper lens care. Fluorescein, a yellow dye, should not be used while the lens is on the eye. The lens absorb this dye and become discolored. Whenever Fluorescein is used in eyes, the eyes should be flushed with a sterile saline solution that is recommended for use in eye care. Use only the recommended solutions.

Oxygen Permeability

Due to the small number of patients enrolled in clinical investigation of lens, all refractive powers, design configurations, or lens parameters available in the lens material are not evaluated in significant numbers. Consequently, when selecting an appropriate lens design and parameters, the eyecare practitioner should consider all characteristics of the lens that can affect lens performance and ocular health, including oxygen permeability, wettability, central and peripheral thickness, and optic zone diameter. The potential impact of these factors on the patient's ocular health must be carefully weighed against the patient's need for refractive correction therefore, the continuing ocular health of the patient and lens performance on the eye should be carefully monitored by the prescribing eyecare practitioner.

Daily wear lens are not indicated for overnight wear, and patients should be instructed not to wear lens while sleeping. Clinical studies have shown that the risk of serious adverse events is increased when patients use overnight wear.

All contact lens wearers must see their eyecare practitioner as directed. Carefully follow the handling, insertion, removal, cleaning, disinfection, storing and wearing instructions in the patient instructions for the care of the contact lens. Always contact the eyecare practitioner before using any medicine or medications in the eyes.

If the lens sticks (stops moving) on the eye, follow the recommended directions on (care for sticking non-moving lens). The lens should move freely on the eye for the continued health of the patient. If the lens does not stick, it will become hard and appear somewhat warped however, it will return to its proper configuration when completely rehydrated in the proper storage solution.

Patients unable to follow lens care regimen or unable to obtain assistance to do so.

PROBLEMS WITH CONTACT LENS AND LENS CARE PRODUCTS COULD RESULT IN SERIOUS INJURY TO THE EYE. It is essential that patients follow their eyecare practitioners' directions and all labeling instructions for proper use of lens and lens care products, including the lens case. EYE PROBLEMS, INCLUDING CORNEAL ULcers, CAN DEVELOP RAPIDLy AND LEAD TO LOSS OF VISION; THEREFORE, IF YOU EXPERIENCE EYE DISCOMFORT, Excessive TEARING, VISION CHANGES, OR REDNESS OF THE EYE IMMEDIATELY REMOVE YOUR LENS AND PROMPTLY CONTACT YOUR EYECARE PRACTITIONER.

Enzyme cleaning does NOT replace routine daily cleaning and disinfecting. For enzyme cleaning, the patient should carefully follow the instructions in the enzymatic cleaning labeling.

**LENS DEPOSITS AND USE OF ENZYMATIC CLEANER**

**Storage:**
- Enzymatic cleaning solutions should be stored at room temperature (20°C to 25°C) when unopened. Once opened, the solutions should be used within 30 days.
- Do not freeze or heat the solutions.
- Do not use sinonase-required storage and disinfection solution to clean or disinfect lenses.
- Do not use enzyme cleaning solutions to clean or disinfect lenses.

**WEARING SCHEDULE**

**The WEARING and REPLACEMENT SCHEDULES SHOULD be DETERMINED by the EYECARE PRACTITIONER.**

Patients tend to over wear the lens initially. The eyecare practitioner should emphasize the importance of adhering to the initial maximum wearing schedule. Regular checkups, as determined by the eyecare practitioner, are also extremely important.

The Intelliblade, Soft Daily Wear Contact Lenses are indicated for daily wear. The maximum supported wearing time for this lens is:

<table>
<thead>
<tr>
<th>Lens</th>
<th>Maximum Wearing Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>6</td>
</tr>
<tr>
<td>2</td>
<td>10</td>
</tr>
<tr>
<td>3</td>
<td>12</td>
</tr>
<tr>
<td>4</td>
<td>14</td>
</tr>
<tr>
<td>5</td>
<td>16</td>
</tr>
<tr>
<td>6</td>
<td>All Waking hours</td>
</tr>
</tbody>
</table>

**STUDIES HAVE NOT BEEN COMPLETED to SHOW that the Intelliblade, Soft Daily Wear Contact Lens IS SAFE TO WEAR DURING SLEEP.**

**WEARING SCHEDULES SHOULD be DETERMINED by the EYECARE PRACTITIONER.**

**FREQUENT/PLANNED REPLACEMENT**

Art Optical recommends that the Intelliblade, Soft Daily Wear Contact Lens be discarded and replaced with a new lens every six months. However, as the Eyecare practitioner, you are encouraged to determine an appropriate lens replacement schedule based upon the response of the patient.

**LENSES CARE DIRECTIONS**

Eyecare practitioners should review with the patient the lens care directions, including both basic lens care information and specific instructions on the lens care regimen recommended for the patient. In many cases, this regimen is determined by the eyecare practitioner and is included in the lens care system. Different solutions cannot always be used together, and not all solutions are safe for use with all lenses. **DO NOT ALTERNATE OR MIX LENS CARE SYSTEMS UNLESS INDICATED ON SOLUTION LABELS.**

- **Clean:** Rinse and disinfecting lens solutions to remove the cleaning solution, mucus, and film from the lens surface, and put lens into correct chamber of the lens storage case. Then repeat the procedure for the second lens. After cleaning, disinfect lens using the system recommended by the manufacturer and/or the eyecare practitioner. To store lens, disinfect and leave them in the cloud/unopened case until ready to wear. If lens is not to be used immediately following disinfection, the patient should be instructed to consult the package insert or the eyecare practitioner for information on storage of lenses.

**Rinse the lens thoroughly with sterile saline solution. DO NOT use water to rinse your lenses.**

**IntelliWave1, Soft Daily Wear Contact Lenses**

- **3) Contact lens cases can be a source of bacteria growth. After removing the lens from the case, empty and rinse the lens storage case with solution as recommended by the lens case manufacturer; then allow the lens case to air dry.**
- **4) Patients must adhere to the lens care regimen recommended by their eyecare practitioner for the Intelliblade, Soft Daily Wear Contact Lens. Failure to follow this procedure may result in development of serious ocular infections.**

**Care for a dry-out (dehydrated) lens:**
- If for some reason, your lens dries out completely a minimum of handling is important, as they are very brittle in the dehydrated state. Carefully place them in rinsing or storage solution for a minimum of thirty minutes during which time they will become soft and flexible. Then follow the cleansing, rinsing, and disinfecting procedures - including soaking the lenses in storage and disinfecting solution for four hours before wearing again.

**Care for a sticking (non-moving) lens:**
- Non-moving or sticking lenses may be caused by lens care errors. If the patient notices this, the patient should be instructed to apply 3 to 4 drops of the recommended lubrication or rewetting solution directly to the eye and wait until the lens begins to move freely on the eye before removing it. If reattachment of the lens continues after 15 minutes, the patient should immediately consult the eyecare practitioner.

**The Intelliblade, Soft Daily Wear Contact Lens must be stored only in the recommended solutions.**
- If left exposed to the air, the lens will dehydrate. If lenses dehydrate, reference above section on caring for dry-out (dehydrated) dry lenses.
- **Note:**

- **DO NOT HEAT THE DISINFECTING SOLUTION and LENS.**
  - Lenses that are chemically disinfect may absorb ingredients from the disinfecting solution, which may be irritating to the eyes. A thorough rinse in fresh, sterile rinsing solution prior to placement on the eye should reduce the potential for irritation.

**LENSES DEPOSITS and USE of ENZYMATIC CLEANER**

- **IntelliWave1, Soft Daily Wear Contact Lenses**
  - Eyecare practitioners should be experienced with the lens.

**CAUTION:**

- **DO NOT HEAT THE DISINFECTING SOLUTION and LENS.**
  - Lenses that are chemically disinfect may absorb ingredients from the disinfecting solution, which may be irritating to the eyes. A thorough rinse in fresh, sterile rinsing solution prior to placement on the eye should reduce the potential for irritation.

**EMERGENCIES**

The patient should be advised that if chemicals of any kind (household products, gardening solutions, laboratory chemicals, etc.) are splashed into the eyes, the patient should:

- **FLUSH EYES IMMEDIATELY with TAP WATER and IMMEDIATELY CONTACT the EYECARE PRACTITIONER or VISIT a HOSPITAL EMERGENCY ROOM without DELAY.**

**HOW SUPPLIED:**

**RECOMMENDED LENSES CARE SYSTEMS**

Eyecare practitioners should be experienced with the lens that is appropriate for the Intelliblade, Soft Daily Wear Contact Lens. Each lens care product contains specific directions for use and important safety information, which should be read and carefully followed. The table below shows solutions that are recommended for use with the Intelliblade, Soft Daily Wear Contact Lenses. **DO NOT HEAT the solutions or lens.**

**Art Optical Contact Lens, Inc.**
- **5774 3 Mile Road NW**
- **Walker, Michigan 49534**
- **Toll Free Number: 800-253-3634**
